ABOUT
OUR PROJECT ON NAIL DISEASE
Human nail can be used for the prediction of various systemic and dermatological diseases. The proposed system – Nail Image Processing System helps us to the analysis of human nail and thereby help us in predicting various nail diseases. The input to the proposed system is the Human Palm Image. The nail portion is segmented and nail color, shape and texture features are extracted and taken together to form a feature vector and then analysis of nail is done which is used for the diagnosis of various nail diseases.is proposed system will help the doctors in the early diagnosis of diseases.
